But I want to know if there's another way to do this without specifying the container type? I tried something like that, and it works as expected : map test; test.insert(string(1,"Test1")) That works on linux gcc version 4.7.2. I tried to do the same with c++11 and it doesn't work : map test; test.insert(make\_pair(1,"Test1")) I get a compilation error : error:'string' is not a template type parameter map test; I know I can use a typedef to make a wrapper or use int instead of char \* in my map f678ea9f9e
